2003 Author Index

Åhrström, B.-O.	An experimental study of the influence of heat storage and transportability of different lubricants on friction under transient elastohydrodynamic conditions	27–37
Akdogan, G.	Wear performance of polytetrafluoroethylenemetal coatings in rolling/sliding contact	103–114
Almas, E. A. M.	Finite difference automatically generated non-uniform grids in the numerical solution of the Reynolds' compressible one-dimensional squeeze-film equation	243–249
Ambekar, P. P.	Failure mechanisms of the head-tape interface during head stepping in a linear tape drive	39–58
Arafa, H. A.	Viscous pumps: comparative assessment of effectiveness	167–174
Arafa, H. A.	Hydrostatic bearings with multiport viscous pumps	333–342
Babalik, F. C.	Optimization of circular hydrostatic axial journal bearings using a multicriteria approach	235–241
Bercea, I.	A unified and simplified treatment of the non-linear equilibrium problem of double-row rolling bearings. Part 1: rolling bearing model	205–212
Bercea, I.	A unified and simplified treatment of the non-linear equilibrium problem of double-row rolling bearings. Part 2: application to taper rolling bearings supporting a flexible shaft	213–221
Bhushan, B.	Failure mechanisms of the head-tape interface during head stepping in a linear tape drive	39–58
Birch, D. J.	Bearing condition assessment. Part 1: size and frequency of surface roughness interactions in impulsive vibration measurements	435–445
Bohan, M. F. J.	Influence of non-Newtonian fluids on the performance of a soft elastohydrodynamic lubrication contact with surface roughness	447–459
Brunn, P. J.	Bearing condition assessment. Part 1: size and frequency of surface roughness interactions in impulsive vibration measurements	435–445
Cavallero, G.	A unified and simplified treatment of the non-linear equilibrium problem of double-row rolling bearings. Part 1: rolling bearing model	205–212
Chan, W. K.	A slip model for gas lubrication based on an effective viscosity concept	187–195
Chiou, Y.-C.	Inverse approach for estimating pressure and viscosity in the elastohydrodynamic lubrication of circular contacts	277–288
Christie, M.	Torque loss in spur gears with interference	385–395
Chu, H.-M.	Inverse approach for estimating pressure and viscosity in the elastohydrodynamic lubrication of circular contacts	277–288
Claro, J. C. P.	An analysis of the influence of oil supply conditions on the thermohydrodynamic performance of a single-groove journal bearing	133–144
Claypole, T. C.	Influence of non-Newtonian fluids on the performance of a soft elastohydrodynamic lubrication contact with surface roughness	447–459
Costa, L.	An analysis of the influence of oil supply conditions on the thermohydrodynamic performance of a single-groove journal bearing	133–144
Dambara, S.	Static characteristics of aerostatic porous journal bearings with a surface-restricted layer	125–132
De Silva, F. A. P.	Finite difference automatically generated non-uniform grids in the numerical solution of the Reynolds' compressible one-dimensional squeeze-film equation	243–249
Dowson, D.	Measurements of the coefficients of friction of different lubricants during impact under high pressure and shear	115–124
Dowson, D.	Isoviscous elastohydrodynamic lubrication of circular point contacts with particular reference to metal-on-metal hip implants	397–402
Ehret, P.	Measurements of the coefficients of friction of different lubricants during impact under high pressure and shear	115–124

Evans, H. P.	Transient elastohydrodynamic point contact analysis using a new coupled differential deflection method. Part 1: theory and validation	289–303
Evans, H. P.	Transient elastodydrodynamic point contact analysis using a new coupled differential deflection method. Part 2: results	305–321
Fathima, S. T.	Couple-stress squeeze films between porous rectangular plates	229–234
Fillon, M.	An analysis of the influence of oil supply conditions on the thermohydrodynamic performance of a single-groove journal bearing	133–144
Fox, I. J.	Influence of non-Newtonian fluids on the performance of a soft elastohydrodynamic lubrication contact with surface roughness	447–459
Gethin, D. T.	Influence of non-Newtonian fluids on the performance of a soft elastohydrodynamic lubrication contact with surface roughness	447–459
Ghosh, M. K.	Thermal effect on the film thickness in high-speed lubricated cold rolling of a strip—an inlet zone analysis	155–165
Goodwin, M. J.	Reciprocating machinery bearing analysis: theory and practice	409–426
Gururajan, K.	Effect of velocity slip in a narrow rough porous journal bearing	59–70
Hiremath, P. S.	Couple-stress squeeze films between porous rectangular plates	229–234
Ho, M.	Bearing condition assessment. Part 1: size and frequency of surface roughness interactions in impulsive vibration measurements	435–445
Holmes, M. J. A.	Transient elastohydrodynamic point contact analysis using a new coupled differential deflection method. Part 1: theory and validation	289–303
Holmes, M. J. A.	Transient elastohydrodynamic point contact analysis using a new coupled differential deflection method. Part 2: results	305–321
Horng, T. L.	Stiffness of an arbitrarily crowned roller compressed between two plates	375–384
Hu, Y.-Z.	A comparative study of the methods for calcuation of surface elastic deformation	145–153
Huang, P.	Experimental study on elastic engagement and friction-coupled transmission	273–276
Hughes, T. G.	Transient elastohydrodynamic point contact analysis using a new coupled differential deflection method. Part 1: theory and validation	289–303
Hughes, T. G.	Transient elastodydrodynamic point contact analysis using a new coupled differential deflection method. Part 2: results	305–321
Hutchings, I. M.	Modelling the entrainment and motion of particles in a gap: application to abrasive wear	427–433
Jalali-Vahid, D.	Isoviscous elastohydrodynamic lubrication of circular point contacts with particular reference to metal-on-metal hip implants	397–402
Jin, Z. M.	Isoviscous elastohydrodynamic lubrication of circular point contacts with particular reference to metal-on-metal hip implants	397–402
Ju, S. H.	Stiffness of an arbitrarily crowned roller compressed between two plates	375–384
Khonsari, M. M.	On the thermoelastic instability of a thin-film-lubricated sliding contact: a closed form solution	197–204
Kusano, Y.	Modelling the entrainment and motion of particles in a gap: application to abrasive wear	427–433
Kyogoku, K.	Half-frequency whirl of pistons in axial piston pumps and motors under mixed lubrication	93–102
Lee, R.-T.	Inverse approach for estimating pressure and viscosity in the elastohydrodynamic lubrication of circular contacts	277–288
Liu, Y.-C.	A comparative study of the methods for calcuation of surface elastic deformation	145–153
Liu, N. Y.	A slip model for gas lubrication based on an effective viscosity concept	187–195
Majumdar, B. C.	Stability of oil-lubricated externally pressurized two-layered porous journal bearings: a non-linear transient analysis	223–228
Mba, D	Bearing defect diagnosis and acoustic emission	257–272
Miranda, A. S.	An analysis of the influence of oil supply conditions on the thermohydrodynamic performance of a single-groove journal bearing	133–144
Morhain, A.	Bearing defect diagnosis and acoustic emission	257–272
Nadivinamani, N. B.	Couple-stress squeeze films between porous rectangular plates	229–234
Nakahara, T.	Half-frequency whirl of pistons in axial piston pumps and motors under mixed lubrication	93–102
Nélias, D.	A unified and simplified treatment of the non-linear equilibrium problem of double-row rolling bearings. Part 1: rolling bearing model	205–212
